

**FOR IMMEDIATE RELEASE**

**SolarLogic Now a NABCEP Continuing Education Provider**

*Santa Fe, NM - April 25, 2012* - SolarLogic, designer and manufacturer of the patented SolarLogic Integrated Controller (SLIC), is now a NABCEP Continuing Education Provider. SolarLogic is one of 17 organizations nationwide to offer Continuing Education Credits (CEC's) for NABCEP-certified Solar Heating professionals.

SolarLogic's SLIC is the first total solar heating control system for homes and small commercial buildings. An integral component of the SLIC based system is a free design website called the SLASH-D which enables installers to easily design and specify the components for any solar heating installation.

"Complexity and callbacks have prevented the solar thermal industry from growing as quickly as it should," says Fred Milder, SolarLogic CEO. "SolarLogic's integrated controller and online design tool is the solution." The single controller manages multiple heat sources directed toward multiple heating loads including domestic hot water, radiant floor or other hydronic heat distribution systems, pools, spas, ice melts, and more. SolarLogic products simplify the heating system design process, as well as installation, commissioning and monitoring. Remote operation and monitoring over the internet is accessible to the home or business owner, the installer, and the SolarLogic team.

NABCEP, which stands for North American Board of Certified Energy Practitioners, requires their Solar Heating certificants log 18 hours of CEC's over a three year period in order to recertify. SolarLogic's training and advanced training courses provide 12 hours of CEC credits; they are offered every six weeks. For more information or to register for a training, please visit [www.solarlogicllc.com](http://www.solarlogicllc.com).
